Managing Classification Attributes

You can add and manage the existing classification attributes.

This task shows you how to:

- Add Existing Classification Attributes
- Remove Classification Attributes

Before you begin:

- You need to create the required classification attributes in the IP Classification app to use them to in the IP Classification Editor widget.

Add Existing Classification Attributes

You can search and add existing classification attributes.

1. Open a class and click the [icon] **Classification Attributes** tab.

2. From the page toolbar, click [icon] **Add Existing Classification Attributes**.

   > **Tip:** You can also right-click the content area in the Classification Attributes tab and click **Add Existing Classification Attributes** in the context menu.

   The **Add Existing Classification Attributes** dialog box appears.

3. Search for the required classification attributes and click **Add**.

The selected classification attributes are added.

Remove Classification Attributes

You can remove the added classification attributes.

1. Select the required classification attribute, and from the page toolbar, click [icon] **Remove Classification Attributes** from the page toolbar.

   > **Tip:** You can also right-click the classification attribute and click **Remove Classification Attributes** from the context menu.

   A confirmation message appears.

2. Click **Remove**.

The selected classification attribute is removed but not deleted.

Managing Libraries

You can create and manage libraries using the IP Classification Editor widget.

This task shows you how to:

- Create a Library
- Delete a Library
- Export a Library
- Import a Library

Create a Library

You can create a general library.

- From the IP Classification Editor home page, click **Create New Library** from the page toolbar.

  > **Tip:** You can also right-click the content area and click **Create New Library** from the context menu.

The library is created and is shown in the content area.

Delete a Library

You can delete a library.

1. Select the required library and click **Delete** from the page toolbar.

   > **Tip:** You can also right-click a library and click **Delete Library** from the context menu.

   A confirmation message appears.
2. Click **OK**.

The library is deleted.

Export a Library

You can export a library in XML format to your local workspace.

1. Select the required library.

2. From the page toolbar, click **More Actions**, and click **Export Library**.

   > **Tip:** You can also right-click a library and click **Export Library** from the context menu.

The library is exported to your local workspace.

> **Recommendation:** Export the libraries created in IP Classification Editor.

Import a Library

You can import a library in XML format from your local workspace to IP Classification Editor.

1. From the page toolbar, click **More Actions**, and click **Import Library**.

   > **Tip:** You can also right-click the home page content area and click **Import Library** from the context menu.

   The **Import Library Structure XML** dialog box appears.
2. Click **Choose file** and select the required xml file from your local workspace.

   Note: Before importing a library structure, the non-existing classification attributes must be created in the IP Classification app.

3. Click **Validate**.

   If the validation is successful, a message appears informing that the file can be imported.

4. Click **Import & Close**.

The library is imported successfully.

Recommendation: Import the libraries created in the IP Classification Editor widget.

Notes:

- You can click **Change Maturity** from the page toolbar to change the maturity of a library. For more information, see Changing Maturity.

- You can click **Share** from the page toolbar to share a library. For more information, see Sharing Content.
